NOT ALL SHUTTERS ARE CREATED EQUAL. 5 TIPS FOR EVALUATING SHUTTERS

1. IT'S WHAT'S ON THE INSIDE THAT COUNTS.

Highprofile painted timber shutters are 100% Poplar, an even-grained timber measuring 540 on the Janka hardness scale. Often shutters sold as 'Basswood' are Laminated Veneer Lumber, a thin Basswood veneer (30%) around laminated strips of other timbers. Always confirm a shutter is 100% of the timber species.

2. NOT ALL PAINTS ARE THE SAME.

Highprofile shutters are finished in quality 2-pack polyurethane paint, used in kitchens and high-end cabinetry. Other shutters may be painted with an inferior Nitro Cellulosic paint. Highprofile's 2-pack paint has been developed to last with a flawless finish.

3. HAND-SELECTION IS KEY.

One of the key features of a stained timber shutter, is the luxurious look of the natural grain. Our stained Highprofile shutters are made from 100% Basswood, which is hand-selected, to ensure even grain appearance every time.

4. 100% ORGANIC AND RENEWABLE.

Highprofile shutters are made from 100% timber, which is recyclable, biodegradable and requires less energy to produce than other inorganic materials. Our unique construction results in a more efficient yield from the tree.

5. CUSTOMISATION EQUAL TO THE IMAGINATION.

Whatever the shape, size, colour, width, or covering, Highprofile shutters can be cost-effectively custom ordered. In fact, Highprofile is the true bespoke shutter brand.
